APPLICATION INSTRUCTIONS

SUBSTRATE QUALITY

The substrate surface must be uniform, smooth and free of any sharp protrusions or burrs, etc. Sarnafil® S 327-20 L must be separated from any incompatible substrates by an effective separation layer to prevent accelerated ageing. Prevent from direct contact with bitumen, tar, fat, oil, solvent containing material and direct contact to other plastic materials, example expanded polystyrene (EPS), extruded polystyrene (XPS), polyurethane (PUR), polyisocyanurate (PIR) or phenolic foam (PF) as this could adversely affect the product properties. The supporting layer must be compatible to the membrane, solvent resistant, clean, dry and free of grease and dust. Metal sheets must be degreased with Sarna Cleaner before adhesive is applied.

APPLICATION

Installation works to be carried out only by Sika instructed contractors for roofing. Installation of some ancillary products, example contact adhesives / cleaners is limited to temperatures above +5 °C. Please observe information given by Product Data Sheets.

APPLICATION METHOD / TOOLS

Installation procedure:

According to the valid installation instructions for Sarnafil® S 327-20 L-types system for mechanically fastened roofing systems.

Fixing Method, linear fastening (Sarnabar®):

Unroll the Sarnafil® S 327-20 L membrane, overlap by 80 mm, weld immediately and fix to the substructure by means of Sarnabar®. The type of fastening and will be advised by Sika. The spacing of the fasteners is in accordance with the project specific calculations. The perimeter piece ends must be secured with the Sarnabar® Load Distribution Plate. For protection fasten a piece of Sarnafil® S 327-20 L under bar end and plate. Leave a 10 mm clearance between bar ends. Do not fasten in hole nearest bar end. Cover the bar ends with a piece of Sarnafil® S 327-20 L and weld. After installation the Sarnabar® must immediately be made water-tight with a Sarnafil® S 327-20 L cover strip. At upstands and at all penetrations, the Sarnafil® S 327-20 L membrane must be secured with a Sarnabar®. The 4 mm diameter S-Welding Cord protects the Sarnafil® S 327-20 L roof covering against tearing and peeling off by wind uplift.

Fixing Method, spot fastening (Sarnafast®):

Sarnafil® S 327-20 L must always be installed at right angles to the deck direction. Sarnafil® S 327-20 L is fixed by means of the Sarnafast® fasteners and barbed washers/tubes along the marked line, 35 mm from the edge of the membrane. Sarnafil® S 327-20 L is overlapped by 120 mm. The spacing of the fasteners is in accordance with the project specific calculations. At upstands and at all penetrations, the Sarnafil® S 327-20 L membrane must be secured with a Sarnabar®. The 4 mm diameter S-Welding Cord protects the Sarnafil® S 327-20 L roof covering against tearing and peeling off by wind uplift.

Welding Method:

Overlap seams are welded by electric hot air welding equipment, such as manual hot air welding machines and pressure rollers or automatic hot air welding machines with controlled hot air temperature.

Recommended type of equipment:

Leister Triac for manual welding Sarnamatic® 681 for automatic welding.

Welding parameters including temperature, machine speed, air flow, pressure and machine settings must be evaluated, adapted and checked on site according to the type of equipment and the climatic situation prior to welding. The effective width of welded overlaps by hot air must be minimum 20 mm.

The seams must be mechanically tested with screw driver to ensure the integrity / completion of the weld. Any imperfections must be rectified by hot air welding.

IMPORTANT CONSIDERATIONS**Geographical / Climate**

Permanent ambient temperature during use is limited to +50 °C.
