

SIKA AT WORK

SAB MILLER BREWERY IN GUAYAQUI, ECUADOR

FLOORING: Sikafloor® PurCem® HS-21, Sikafloor® MultiDur ES-23

BUILDING TRUST

SAB MILLER BREWERY

PROJECT DESCRIPTION

In 2005 Cerveceria Nacional was acquired by SAB Miller. In order to fulfil the international drinks quality standards Cerveceria Nacional built a new modern processing area in Guayaquil plant.

Location: Guayaqui, Ecuador
Construction year: 2005

PROJECT REQUIREMENT

SAB Miller requested a high performance solution for hygienic and tough floors that also allow easy cleaning and create an environment consistent with quality beer production. The bottling and packaging materials need to be kept totally free from contamination to prevent any adverse effects on the beer. Additional condition was the extremely short timeline for the flooring application.

SIKA SOLUTIONS

Flooring systems : Sikafloor® PurCem® HS-21,
Sikafloor® MultiDur ES-23

The work had to be carried out directly on the completely new concrete floor slabs, just 5 days after they had been poured and finished. This required a surface vapor barrier to be applied to allow early installation of a new protective epoxy flooring system.

Sika proposed Sikagard®-720 EpoCem as a moisture barrier layer, which could then be followed quickly by the application of Sikafloor® PurCem® system and Sikafloor® MultiDur system. Sikafloor® PurCem® offers an exceptional protection to floors subjected to heavy loading chemical exposure and liquids.

PROJECT PARTICIPANTS

Project owner: SAB Miller – Cerveceria Nacional Brewery
Contractor: Sikaplica
Sika organization: Sika Ecuatoriana S.A.

Our most current General Sales Conditions shall apply. Please consult the most current local Product Data Sheet prior to any use.
